DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 6, 19, 24 – 27, 36 – 43, and 47 – 50, drawn to a system comprising a cryptographic application program interface for managing secure communications and a separate device utilized for cryptographic protection, are classified in class 713, subclass 192.
- II. Claims 7 – 18, 20 – 23, 28 – 35, and 44 – 46, drawn to a mobile telecommunications device comprising specific cryptographic and wireless security features, are classified in class 380, subclass 270.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a mobile telecommunications device comprising a public key cryptographic module, the cryptographic module providing cryptographic services over a telecommunications interface, a WIM module, or a security manager module for interfacing with a remote computer. The subcombination has separate utility such as that it can be used to provide cryptographic services for a generic system or device as opposed to solely the

1 combination system requiring a cryptographic application program interface and
2 supporting elements.

3 Because these inventions are distinct for the reasons given above and have
4 acquired a separate status in the art as shown by their different classification, restriction
5 for examination purposes as indicated is proper.
